Graduate Support Engineer Trainee Assessment

Objective

Build a simple task management application using AI-assisted development tools.

You may use any AI tools, frameworks, libraries, databases, or hosting platforms of your choice, including free-tier services.

Functional Requirements

The application should allow users to:

1. Sign in using Google Authentication
2. Create tasks
3. View the list of tasks
4. Update the status of a task

Each task should support the following states:

1. Planned
2. In Progress
3. Complete

Important Notes

1. You are NOT expected to build a large or feature-rich application.
2. The above use cases are sufficient for this assessment.
3. Do not unnecessarily expand the scope of the application.

However, part of the evaluation is your ability to:

1. identify missing details or ambiguities in the requirements
2. make reasonable assumptions
3. improve the usability and completeness of the solution
4. document your decisions clearly

Documentation Requirements

Provide user documentation that includes:

1. How to access and use the application
2. Login instructions
3. Important assumptions made
4. Known limitations
5. Important notes or warnings for users
6. Setup instructions (if applicable)

Submission Requirements

Please submit:

1. Source Code Repository (GitHub preferred, or any other repository)
2. Live Application URL (if deployed)
3. Documentation
4. AI Usage Summary

Include:

1. Which AI tools you used
2. How you used them
3. Example prompts (optional)
4. What AI-generated code you modified or corrected manually

Evaluation Criteria

You will be evaluated based on:

Area	**Evaluation Focus**
Requirement Understanding	Ability to derive clarity and identify gaps
AI Tool Usage	Effective and responsible use of AI tools
Application Functionality	Correct implementation of required features
Problem Solving	Ability to troubleshoot and make decisions
Documentation	Clarity and completeness of user guidance
User Experience	Simplicity and usability
Deployment	Ability to run or deploy the application
